

"We got to explore interesting topics, work together as a team and share awesome ideas. It's all about being creative, interactive and having great discussions where we can share our thoughts and examples." – SUPERHEROES student in Bulgaria

Over the last two year a European Partnership has worked on creating a sustainable lesson programme for teachers in high schools called SUPERHEROES. It focusses on the Sustainable Development Goals (SDGs) During these years the partners aimed to change the mindset of students aged 12 to 16 to help them take action in a sustainable world.

The six partners involved in the project, from the Netherlands, Latvia, Bulgaria and Spain have used their experiences to create a easy to implement programme. Since the start of the project the partners have created a lesson plan, E-book, platform, and actions plans. These results will help teachers and students alike to see examples and get inspired to use the materials themselves.

To ensure that all the materials were usable the partners have tested them extensively with teachers and students. At its peak in development the partners went to Caceres, to test the material with 5 students and two teachers from all countries. The students enjoyed this very much and they looked back to a very nice experience. For some it was even the first trip outside their countries.

To help teachers implement teachers and schools to implement the lesson plan into their own schools the partners have developed action plans. As the partners are aware that not all schools work the same, and some do only want to implement small parts. Through dividing the lesson plan in four topics, and creating the actions plans it is very easy for teachers to use it in their own classrooms. It can be found <a href="https://example.com/here.">https://example.com/here.</a>

With the end of the project coming close, we want to thank all participants who helped us developed the project results, without their support it would not have been possible to create these results. From the contact with teachers and students we have had they all look back at a very nice experience. Once again, we thank you all and expect that the project results will be used continuously in the future.

If you got interested please have a look here to find how to implement the materials yourselves.
